RemoteT

RemoteT Multi-Remote Solution Service proposal

Introducing an optimized solution for managing multiple PCs efficiently and simultaneously

RemoteT is a multi-remote solution

designed to enhance IT infrastructure management efficiency and reduce operational costs enterprises

Proposal Background

Rising Number of Device in Use

As IT teams and enterprises grow, administrators are required to manage hundreds or even thousands of PCs simultaneously.

Increase in Repetitive and Routine Tasks

The growing number of endpoints results in more frequent repetitive operations, including security updates, power control, and software deployment.

Rising Need for Fast Response

Real-time monitoring and remote control have become essential for timely responses to urgent or unexpected IT incidents.

Rising Security and Access Threats

The proliferation of endpoint devices increases the risk of data breaches and exposes vulnerabilities in secure access control.

Increase in telecommuting

With the shift to remote and hybrid work, there's a growing need to manage and support IT operations across multiple devices from any location.

"RemoteT provides a complete and integrated solution to address all of these challenges."

Fast and Reliable Remote Solution

Multi-Device Remote Control

RemoteT is a remote control solution that enables efficient and simultaneous control of up to 500 PCs.

Real-Time Monitoring

Monitor multiple PCs in real time to ensure efficient and centralized management.
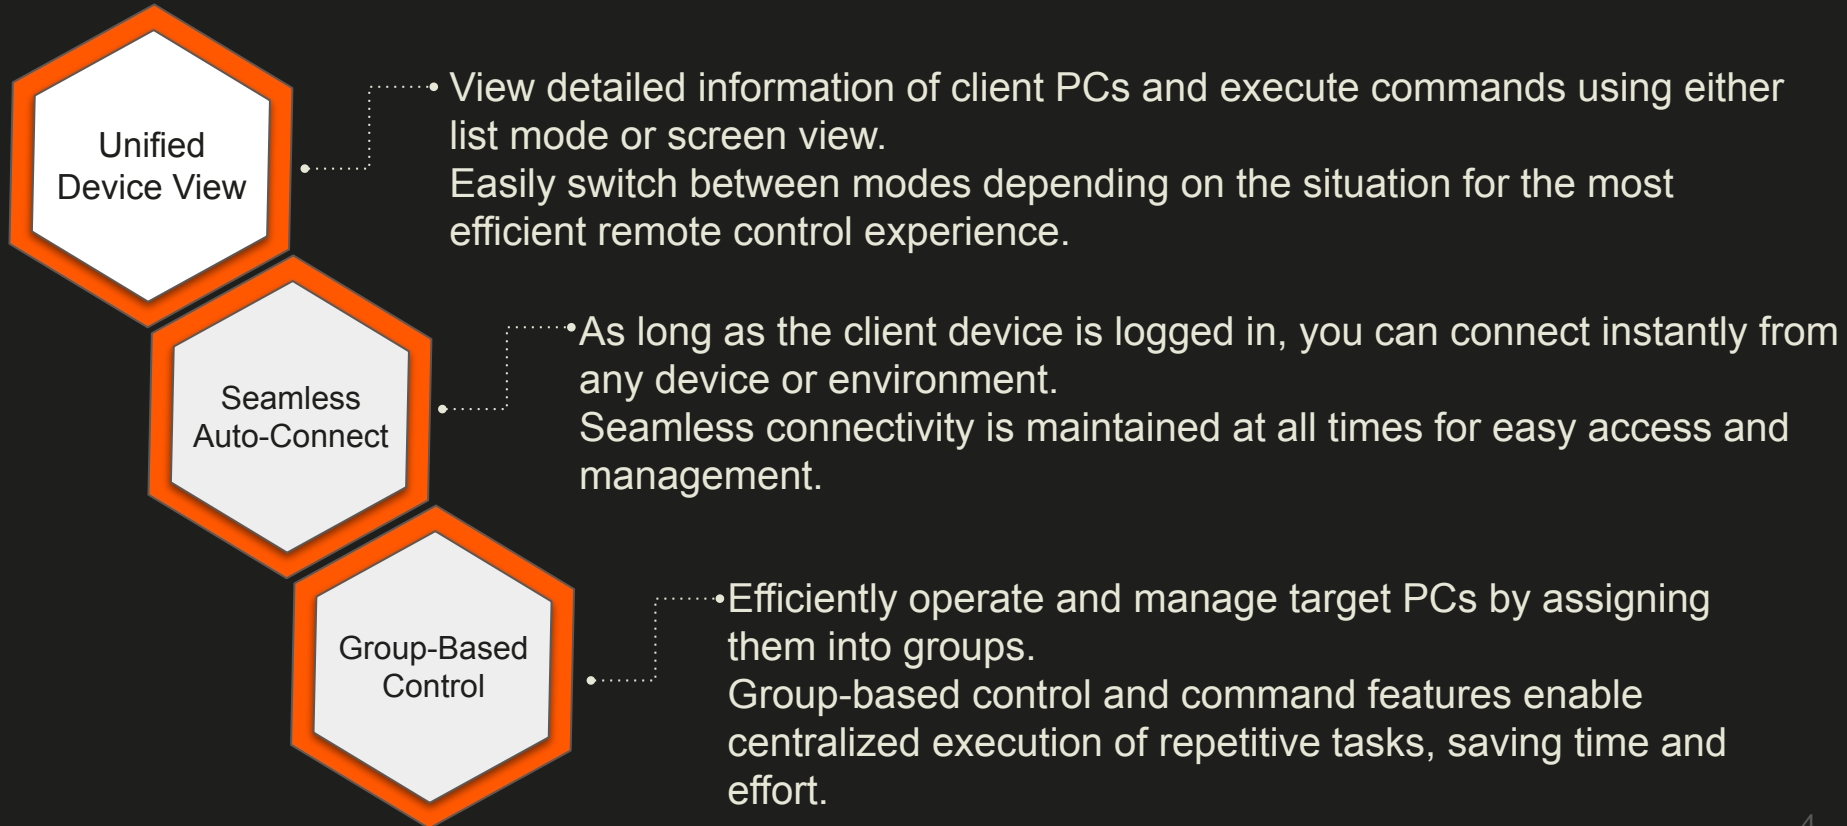

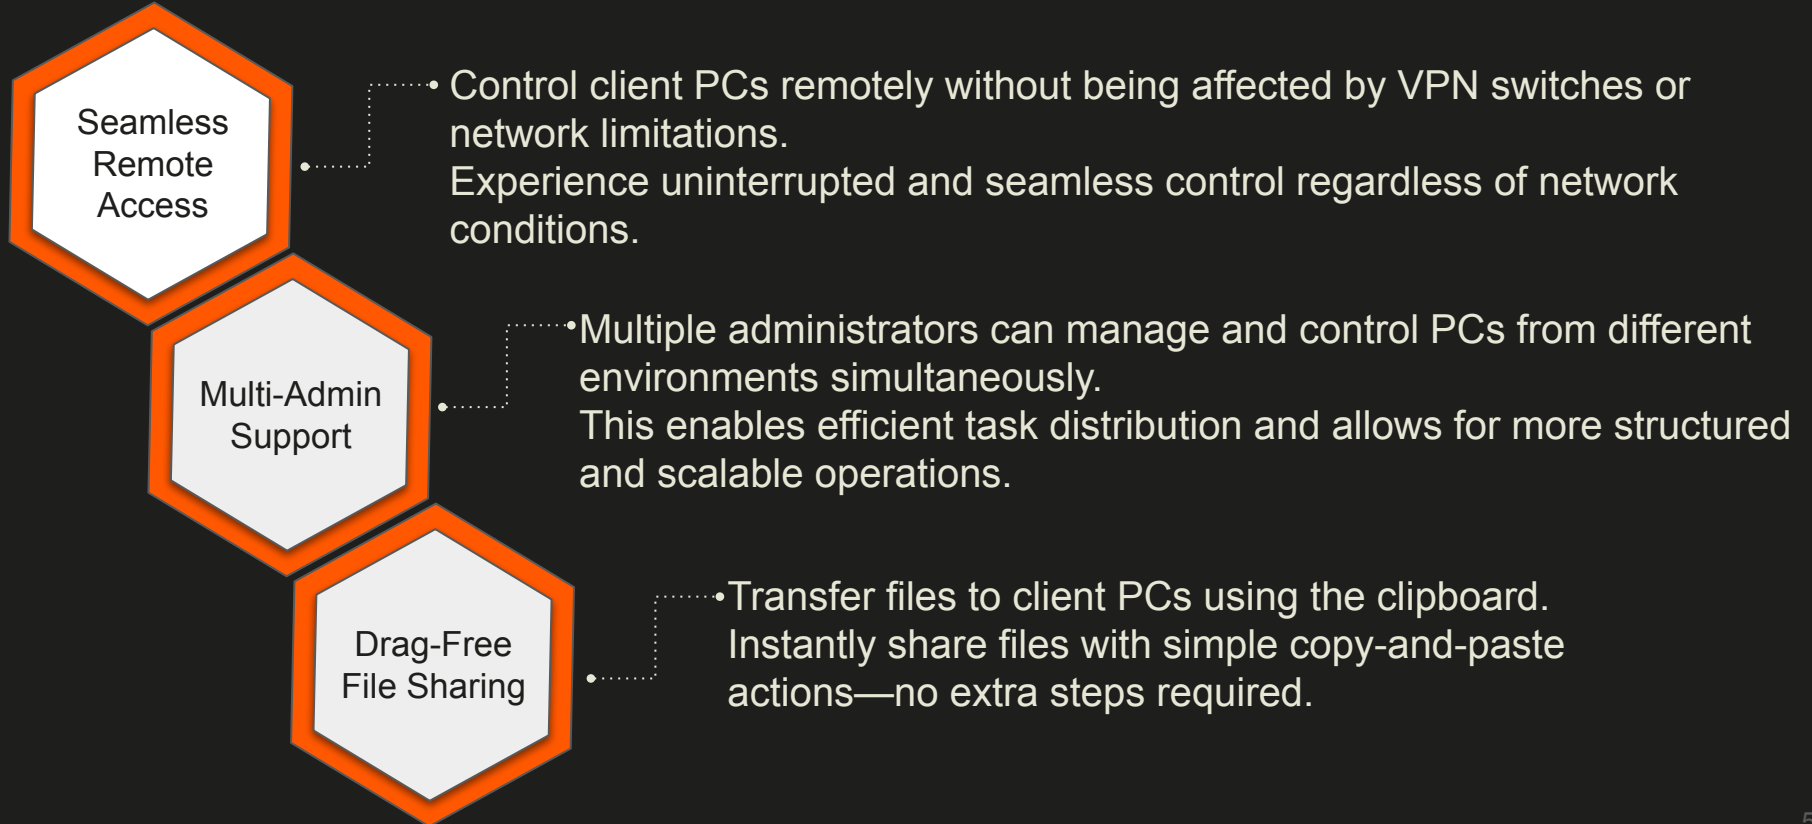

User-Friendly Interface

Equipped with smart features such as KVM support, multi-file transfer, and automatic device pairing, RemoteT delivers a highly user-friendly experience.

Secure Connectivity

Utilizing end-to-end encryption technology, RemoteT provides a safe and convenient working environment for all users.

Main Features

Unified Device View

View detailed information of client PCs and execute commands using either list mode or screen view.
Easily switch between modes depending on the situation for the most efficient remote control experience.

Seamless Auto-Connect

As long as the client device is logged in, you can connect instantly from any device or environment.
Seamless connectivity is maintained at all times for easy access and management.

Group-Based Control

Efficiently operate and manage target PCs by assigning them into groups.
Group-based control and command features enable centralized execution of repetitive tasks, saving time and effort.

Main Features

Seamless Remote Access
Control client PCs remotely without being affected by VPN switches or network limitations.
Experience uninterrupted and seamless control regardless of network conditions.

Multi-Admin Support
Multiple administrators can manage and control PCs from different environments simultaneously.
This enables efficient task distribution and allows for more structured and scalable operations.

Drag-Free File Sharing
Transfer files to client PCs using the clipboard.
Instantly share files with simple copy-and-paste actions—no extra steps required.

Enterprises & Public Institutions

Designed to efficiently control and maintain large-scale PC infrastructures.
Provides a secure, scalable, and stable remote management solution ideal for enterprise and government environments.

Educational Institutions

Enables real-time monitoring and control of student PCs in schools and academies, ensuring a focused and secure learning environment.
Helps block unauthorized programs to improve concentration and maximize learning efficiency.

Hospitality & Facility Operations

In environments like hospitals, PC cafés, and hotel franchises, PCs can be managed remotely without the need for on-site visits.
Efficient maintenance and centralized control are possible anytime, anywhere.

Industrial & Logistics Sectors

Allows remote monitoring and control of devices such as DID displays and unmanned terminals.
Maximizes operational efficiency and ensures quick response in the event of system issues.

RemoteT is the ideal solution for any industry that manages multiple PCs.

Conclusion

The Future of Optimized IT Management

Streamlined Solution
User-centric interface and features tailored for operational convenience.

Cost Efficiency
Reduced management costs through the automation of repetitive tasks.

Enhanced Security
Robust security ensures a safe and stable working environment.

With RemoteT, administrators can focus on more critical tasks. Automating repetitive operations significantly improves overall productivity.

RemoteT

"Control Smarter. Work Faster. RemoteT."

Thank you
